

# KRÖGER

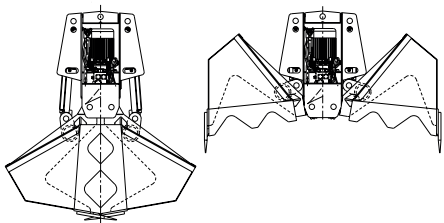

## GREIFERTECHNIK

### Applications

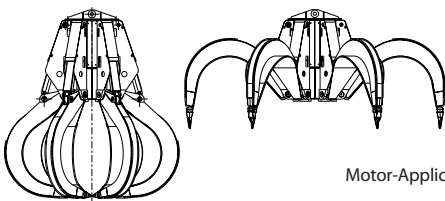

Particularly suitable for substitute fuel (EBS) incineration plants using wood chips, shredded plastics or tyres, paper and paste chippings, pellets and/or fluff. Application mainly in cement power stations, paper power stations and industrial power stations (calorific rich segment).

### Technical design

- Weight-optimised construction and maximum volume for optimum use of crane's lifting capacity
- Both engine grip arms (MZG and MMGM) suitable for fully automatic system operation with fixing of sensors
- MZG ideal for structurally cramped situations and low spaces
- Weight-saving construction method to achieve high payload
- Overall sizes and relative cubic capacity as well as grip arm suspension tailored to individual customer requirements
- **Grip arm impulse:**
  - Vertical arrangement of the electronic-hydraulic impulse aggregate with high-pressure pump
  - Turn or valve control
- **Mounting of grab joints:**  
KRÖGER low-maintenance or MAINTENANCE-FREE mounting system
- Stable, torsionally rigid design with direct cylinder articulation
- **Grab shells:**
  - Shell design adapted to material flow
  - Material: S355J2+N or Hardox 450

◀ Typ MZG EBS  
Motor-driven clamshell grab.

◀ Typ MMGM EBS  
Motor-Applications driven multi-shell grab.
